

Cannabinoid Profile Testing and Labeling Guidance Document

October 01, 2025

This guidance is issued by the Cannabis Control Commission, through its Cannabis Office, to provide clarification regarding cannabinoid profile reporting and labeling requirements. This guidance is issued in accordance with the Rhode Island Cannabis Act, The Medical Marijuana Act, and the Rules and Regulations related to the Operational Requirements for Cannabis Establishments, 560-RICR-10-10-2 (the “Regulations”). This document does not replace a thorough reading of the Acts and/or rules and regulations.

“Cannabinoid profile” for purposes of these regulations means amounts expressed as the dry-weight percentages, unless otherwise specified by the Commission, of delta-9-tetrahydrocannabinol, cannabidiol, tetrahydrocannabinolic acid, cannabidiolic acid and any other advertised cannabinoid. Amounts of other cannabinoids may be required by the Commission.

1. On what date are cannabis products required to have cannabinoid amounts expressed as dry weight percentages?

- Testing Labs should continue to analyze cannabis on an “as is” basis and continue to report cannabinoid profiles as such.

2. What cannabinoids are required to be tested and reported individually on the label?

- Delta-9-tetrahydrocannabinol
- Tetrahydrocannabinolic acid
- Cannabidiol
- Cannabidiolic acid
- Delta-8-tetrahydrocannabinol
- Any advertised cannabinoid

3. Can total potential THC be reported on the label?

- Total Potential THC can be reported on the label and advertised.
- Total Potential CBD can be reported on the label and advertised.

4. Can total active cannabinoids (TAC) be reported on the label?

- TAC is not permitted to be included on the label.

Any questions concerning this Bulletin or requirements under the Acts and Regulations should be directed to CCC.CannabisCompliance@ccc.ri.gov.
